

# Somerville Children Give Many Reasons Why the Great Majestic Range Should be in Every Home

**No. 1.** The great Majestic is known as the range with a reputation first, because it is the best constructed range on the market today. No other range has such a reputation, as it is made up of the very best material. It has the best appearance from the outside and has all necessary points of advantage that is required to make a range perfect. It has been tested and proved to bake better than any other range and also, heats plenty of water quickly and hot at the same time, and uses very little fuel.

"The cost seems to be more than some other ranges, but at the same time this great majestic range is so far ahead of all other ranges in every respect that if it is taken care of it will prove far cheaper than any other range that has ever been produced.

MARY McQUEEN"

In answer to the following question:  
*"Why is the Majestic known as the 'Range with a Reputation?'"*

The best answers to the question were written by Joe Polk Bowers and Mary McQueen. On each side of this are copies of the prize-winning letters written by them.

**REMEMBER, Saturday is the Last Day** of our Demonstration, and your last chance to get a handsome \$8.00 set of Cooking Utensils FREE. Come in and let us show you the best range in the world, while in operation under a paper stove pipe. Call and let us show you this wonderful range this week, whether you want a range or not, We can save you money.

**No. 2.** "Why is the Majestic known as the range with a reputation." Because without a reputation it could not have obtained its present popularity, nor could it have stayed on the market (25) Twenty Five Years, without especial merit.

"The material with which it is made is practically indestructible which is one of the best features any range could have from point of economy, as well as genuine satisfaction, while using same.

"What is your age? (12) Twelve years old.

"When is your birthday? October the 1st, 1916.

JOE BOWERS."

For want of space we cannot publish all the letters of the children in the contest, but wish to give SPECIAL MENTION to the following children for writing so much about the reputation of the Greatest Range in the World:

Sam Shaw, Jr. Clyde Culbreth

#### ANNOUNCEMENT.

The Falcon is authorized to announce F. J. McKee of the Eleventh District as a candidate for Representative from this county in the General Assembly of the next legislature of Tennessee, subject to the action of the democratic party.

An ice-wagon drivers strike in Memphis, a dairy wagon drivers strike, street car operatives striking in New York and the strike by 400,000 railway train-men threatened, showing plainly how the public looks on in all strikes and then foots the expense bill besides suffering much inconvenience.

When the Memphis ice-wagon drivers went on a strike last Saturday they gave it out that they would do all in their power to prevent the ice dealers sending out wagons with other drivers. No man can deny their right to strike, but their interference with other men who might take their places is a species of lawlessness and should not be permitted.

It was over confidence on the part of those favoring a constitutional convention in this state more than anything else which caused the defeat of the

question in the recent August election. C. C. Gilbert, who was secretary of the association which worked so hard for the convention, has stated that the next legislature will be asked to pass another enabling act and the matter threshed out in another election next year. Fayette county did her part for the question and will do it again.

Are you planning to plant a part of your lands to a winter growing crop this fall? It is now time to plant these crops and will soon be seedling time.

Somerville needs a firm to buy the farmers produce and sell field seeds, fertilizers, etc., not now sold in the county. The editor of The Falcon has ordered for farmers in the past sixty days about \$200 worth of Crimson Clover seed just as a matter of accommodating them. They would buy such things here if they could.

While the question of holding a constitutional convention which was recently defeated is again under discussion there are a number of reforms that can be made in each county by special acts as have already been passed in so many counties. Fayette is badly in need of some of these. An act establishing the office of county judge in this county would expedite hearings in such a way as to save the county several thousand dollars each year and save many an accused staying for months in the county jail.

The striking need of co-operation among Somerville business men and nearby farmers is emphasized almost each week by reports in the daily papers of the great good being done in other communities by this co-operation. This help in nearly every case comes thru a local association of business men and farmers and in fact is difficult in any other way. Somerville has no kind of a co-operative association. As a result we are paying higher freight rates than any other town about us, we are suffering loss of telegraphic communication with the outside world, we are paying higher rates for fire insurance than others, we are failing to furnish farmers a market for a surplus produce, and are failing to furnish them a place to buy their field seeds, fertilizers, etc., in fact we are falling short of what we should do in many ways, and every business man in Somerville and other towns in the county is suffering in a business way, all for lack of co-operation. The great Tri-State Merchants

Whenever You Need a General Tonic Take Grove's

The Old Standard Grove's Tasteless chill Tonic is equally valuable as a General Tonic because it contains the well known tonic properties of QUININE and IRON. It acts on the Liver, Drives out Malaria, Enriches the Blood and Builds up the Whole System. 50 cents

Association holding its annual meeting in Memphis this week has for its purpose the organization of this co-operative movement in every hamlet in the three great states which furnish Memphis her business, and The Falcon hopes Somerville business men will join in and help to put the movement on foot here.

**Catarrh Cannot Be Cured** with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a local disease, greatly influenced by constitutional conditions, and in order to cure it you must take an internal remedy. Hall's Catarrh Medicine is taken internally and acts thru the blood on the mucous surfaces of the system. Hall's Catarrh Medicine was prescribed by one of the best physicians in this country for years. It is composed of some of the best tonics known, combined with some of the best blood purifiers. The perfect combination of the ingredients in Hall's Catarrh Medicine is what produces such wonderful results in catarrhal conditions. Send for testimonials, free. F. J. CHENEY & CO., Props., Toledo, O. All Druggists, etc. Hall's Family Pills for constipation.

#### Fall Gardening in the South

U. S. DEPT. OF AGRICULTURE.  
Washington, D. C.—Home gardeners in many sections of the South and Southwest where crops have been gathered or are now nearing maturity, need not reconcile themselves to the existence of bare or unproductive land from now until next spring, according to garden specialists of the U. S. Department of Agriculture. With judicious choice of crops and locations, they may plant seeds from now until October or November and should, as a result, have fall, winter and spring vegetables. The successful fall garden is a possibility, the Department garden specialists say, with nearly all vegetables grown in spring and summer, in practically all parts of the Southern States, except in areas of high altitude, and the more northerly portions of the region.

A new crop of cabbage should be planted now, and it may be profitable to try the experiment of planting both in the open ground, where the plants are to remain, and in frames for transplanting. The frames or beds should be located in a relatively cool, shady place. With this crop promising results have already been obtained by planting several seeds in a hill and thinning to one plant. If the field planting should not survive, however, in some instances, the grower, it is pointed out, is protected by having on hand the farm grown plants. Ordinarily the seed planted direct to the field will produce an earlier crop than seeds planted in a frame and transplanted.

Among the vegetables which may be planted at any particular time during the summer, with fair assurance of success, are beans. Bush squash may also be planted even in the hottest weather if they have not been made a part of the garden at an earlier season. With the beginning of August practically the entire list of ordinary vegetables is open to the fall gardener for choice. Beets, parsnips, carrots, celery, sweet corn, radishes, lettuce and peas may be planted at this time, many of them in succession crops at frequent intervals. Later in the month and during the early part of September, kale, spinach, mustard, turnips, col-

lards and parsley may also be planted. During September onion sets should be put out and in October, and even later, onion seeds may be planted for a spring crop.

Among the crops of these late plantings which the Southern gardener will find available for winter use, are beets and the other root crops, such as parsnips, and carrots, and kale, collards, spinach and mustard. Many of the plants, he will find, may be carried by slight protection even into cold weather without suffering damage. To the crops will be carried over for the development in the early spring should be added salsify or oyster plant, which may be planted practically any time during the late summer or early fall.

The following specific directions for fall planting of certain seeds in the South have been prepared by the department's plant specialists:

#### BEETS

Beets planted in the South in August and early September will produce a crop for late fall and early winter use. Where hand cultivation is to be given, sow the seeds in drills 14 to 18 inches apart and cover to the depth of about 1 inch. For horse cultivation the rows should be 2½ feet apart. Give frequent shallow cultivation. The beets may be left in the ground thru the winter to be pulled when wanted.

Varieties recommended: Crosby's Egyptian, Bassano, Early Eclipse, and Blood Turnip.

#### TURNIPS

Turnip seed may be sown during the latter part of August and thruout September and the first half of October. Sow turnip seed thickly in rows 15 to 18 inches apart, and when the plants reach a height of 4 or 5 inches begin thinning, using the young plants for greens. For good roots thin the plants to about 3 inches apart in the row. Keep the land well cultivated to keep down the weeds and to leave the surface loose and friable. In a small garden, cultivation with a hand

**EVER SALIVATED BY CALOMEL? HORRIBLE!**

Calomel is quicksilver and acts like dynamite on your liver.

Calomel loses you a day! You know what calomel is. It's mercury; quicksilver. Calomel is dangerous. It craves into your bile like dynamite, cramping and sickening you. Calomel attacks the bowels and should never be put into your system.

When you feel bilious, sluggish, constipated and all knocked out and believe you need a dose of dangerous calomel just remember that your druggist sells for 50 cents a large bottle of Dodson's Liver Tonic, which is entirely vegetable and pleasant to take and is a perfect substitute for calomel. It is guaranteed to start your liver without stirring you up inside, and can not salivate.

Don't take calomel! It makes you sick the next day; it loses you a day's work. Dodson's Liver Tonic straightens you right up and you feel great. Give it to the children because it is perfectly harmless and doesn't gripe.

cultivator is the most practicable. Turnips may be left in the ground until needed on the table or may be pulled as soon as they mature, and stored in a cellar or buried in banks or pits. The varieties commonly grown in the South are Purple Top Globe, White Globe, Seven Top, White Milan and Yellow Aberdeen.

#### COLLARDS

Collards can be grown in the same way as outlined for turnips.

#### KALE

Kale can be grown in the open thruout the winter in practically all seasons of the South. Sow the seed in September and October and in drills 18 inches apart for hand cultivation and 30 inches for horse cultivation. As soon as the plants reach a height of 4 or 5 inches they should be thinned. The plants pulled may be used for greens. The cultivation for kale should be the same as turnips. Varieties recommended Dwarf Curled, Tall Scotch and Siberian.

#### SPINACH

Spinach is one of the best crops grown for greens and should be found in every home garden. It can be grown in the open during the autumn and winter in all sections south of Norfolk, Virginia. Sow the seed in the latter part of August, in September, or October, in drills 15 to 18 inches apart at the rate of one ounce to 100 feet of row. When the plants begin to crowd in the row they should be thinned. The larger plants are selected first, and the smaller or later ones are thus given room to develop.

#### Founder Never Results

When Farris' Colic Remedy is used for it does not contain opiates which constipate, but is laxative in its action. It is dropped on the horses tongue—cures by absorption. We sell it on the money back plan. W. S. Shinnau't. 9.1
